Annual Cumulative Expense Examples

A Fund's annual return is reduced by its fees and expenses for that year. The examples below are intended to help you understand the annual and cumulative impact of the Fund's fees and expenses on your investment through a hypothetical investment of \$10,000 held for the next 10 years. The examples assume the following

- On the date exactly one year before the first period end date below, you invest \$10,000 in the Fund and you will hold the shares for the entire 10 year period;
- Your investment has a 5% return each year;
- The Fund's operating expenses remain at the levels discussed below and are not affected by increases or decreases in Fund assets over time;
- At the time of purchase, any applicable initial sales charges (loads) are deducted; and
- There is no sales charge (load) on reinvested dividends.
- The annual costs are calculated using the Net Expense Ratios for the period through the expiration of any fee waivers or expense reimbursement memorialized in a written contract between the Funds and JPMIM and/or its affiliates; and the Gross Expense Ratios thereafter.

"Gross Cumulative Return" shows what the cumulative return on your investment at the end of each 12 month period end date (year), shown below, would be if Fund expenses are not deducted. "Net Cumulative Return" shows what the cumulative return on your investment at the end of each year would be assuming Fund expenses are deducted each year in the amount shown under "Annual Costs."

"Net Annual Return" shows what effect the "Annual Costs" will have on the assumed 5% annual return for each year.

Your actual costs may be higher or lower than those shown.
