The term “Document” refers to any Document now or at any time in your possession, custody, or control. A person is deemed in control of a Document if the person has any ownership, possession, or custody of the Document, or the right to secure the Document or a copy thereof from any person or public or private entity having physical possession thereof.

2. “You” or “Your” means Laskarina Karastamati and Your agents, representatives, accountants, attorneys, and all other persons or entities acting or purporting to act for or on Your behalf.

4. “Communication” is used in its broadest sense to encompass any transmission or exchange of thoughts, ideas, data, messages, inquiries or information of any kind in any form whatsoever, between or among any two or more persons, including without limitation, between or among parts, divisions, employees or agents of a person other than a natural person, whether such

transmissions or exchanges are oral or written and whether they are personally, electronically or otherwise generated, transcribed, transmitted or recorded.

**ELECTRONICALLY STORED INFORMATION
PRODUCTION FORMAT**

All ESI is to be produced in an “imaged” file with the corresponding “image load/unitization files,” “OCR or Extracted text files,” and the “associated delimited metadata database.” Additionally, select files should be produced in their native file format where an image file does not adequately represent the files as maintained in the ordinary course. The key concepts are outlined below.

1. **Native Files:** Microsoft Access files, Excel files, .CSV files, other similar databases and spreadsheet files, and media files shall be produced in the format which the electronically stored information was originally created. Native Files will be produced together with a placeholder TIFF image. Each TIFF placeholder will contain language indicating that the document is being produced in native format. A relative file path to the native file shall be provided in the metadata data file as described in item 5. To the extent the requesting party obtains through discovery a file or document that it believes is not adequately represented in an image file format, it may request that file or document be produced in native format, the production of which may not unreasonably be withheld.

2. **Image Files:**

a. Images files shall be 300 DPI Group IV single-page TIFF files (color images must be produced in JPEG format);

b. Hidden content, tracked changes or edits, comments, notes, and other similar information viewable within the native file shall also be imaged so that such content is viewable on the image;

c. Images must be endorsed with sequential Bates numbers in the lower right corner of each page and the file name of each image file shall be the Bates number.

d. AUTOCAD/photograph files should be produced as a single page JPEG file.

3. **Image Cross-Reference File:**

The image cross-reference file (.LOG or .OPT) links the images to the database records. It should be a comma-delimited file consisting of seven fields per line with a line in the cross-reference file for every image in the database with the following format:

ImageID,VolumeLabel,ImageFilePath,DocumentBreak,FolderBreak,BoxBreak,PageCount

Sample Image Cross-Reference File:

IMG0000001,,E:\001\IMG0000001.TIF,Y,,,
IMG0000002,,E:\001\IMG0000002.TIF,,,
IMG0000003,,E:\001\IMG0000003.TIF,,,
IMG0000004,,E:\001\IMG0000004.TIF,Y,,,
IMG0000005,,E:\001\IMG0000005.TIF,Y,,,
IMG0000006,,E:\001\IMG0000006.TIF,,,

4. **Text File:** An OCR or Extracted text file which corresponds to each produced document shall be provided for each document in the production as follows:

a. Text must be produced as separate text files, not as fields within the .DAT file.

The full path to the text file (OCRPATH) should be included in the .DAT file.

b. The text file name shall be the same name of the first image page for the document, followed by .txt.

c. An OCR or Extracted text file containing the produced document's content will be provided for all documents whether it is produced as an image file or native).

5. **Data File:** A data file shall be provided in a .DAT file format that extracts metadata into fields in a delimited text load file. The parties should use Concordance standard delimiters (ASCII 020 corresponding to a comma, ASCII 254 corresponding to a quote, ASCII 174

corresponding to a new line, and a semicolon used to separate values). The fielded data should include all the below metadata fields for a file/document. The first line of the data load file should contain the field headers indicating the contents of each field, and each subsequent line should contain the fielded data for each document.

The term “Document” refers to any Document now or at any time in your possession, custody, or control. A person is deemed in control of a Document if the person has any ownership, possession, or custody of the Document, or the right to secure the Document or a copy thereof from any person or public or private entity having physical possession thereof.

4. “Communication” is used in its broadest sense to encompass any transmission or exchange of thoughts, ideas, data, messages, inquiries or information of any kind in any form

whatsoever, between or among any two or more persons, including without limitation, between or among parts, divisions, employees or agents of a person other than a natural person, whether such transmissions or exchanges are oral or written and whether they are personally, electronically or otherwise generated, transcribed, transmitted or recorded.

7. Each request contemplates production of all Documents in their entirety. If only a portion of a Document is responsive to one or more requests, the Document shall be produced in its entirety.

8. If any Document is withheld in whole or in part for any reason including but not limited to, a claim of privilege or other protection from disclosure such as the work product doctrine

**ELECTRONICALLY STORED INFORMATION
PRODUCTION FORMAT**

All ESI is to be produced in an “imaged” file with the corresponding “image load/unitization files,” “OCR or Extracted text files,” and the “associated delimited metadata database.” Additionally, select files should be produced in their native file format where an image file does not adequately represent the files as maintained in the ordinary course. The key concepts are outlined below.

1. **Native Files:** Microsoft Access files, Excel files, .CSV files, other similar databases and spreadsheet files, and media files shall be produced in the format which the electronically stored information was originally created. Native Files will be produced together with a placeholder TIFF image. Each TIFF placeholder will contain language indicating that the document is being produced in native format. A relative file path to the native file shall be provided in the metadata data file as described in item 5. To the extent the requesting party obtains through discovery a file or document that it believes is not adequately represented in an image file format, it may request that file or document be produced in native format, the production of which may not unreasonably be withheld.

2. **Image Files:**

a. Images files shall be 300 DPI Group IV single-page TIFF files (color images must be produced in JPEG format);

b. Hidden content, tracked changes or edits, comments, notes, and other similar information viewable within the native file shall also be imaged so that such content is viewable on the image;

c. Images must be endorsed with sequential Bates numbers in the lower right corner of each page and the file name of each image file shall be the Bates number.

d. AUTOCAD/photograph files should be produced as a single page JPEG file.

3. **Image Cross-Reference File:**

The image cross-reference file (.LOG or .OPT) links the images to the database records. It should be a comma-delimited file consisting of seven fields per line with a line in the cross-reference file for every image in the database with the following format:

ImageID,VolumeLabel,ImageFilePath,DocumentBreak,FolderBreak,BoxBreak,PageCount

Sample Image Cross-Reference File:

IMG0000001,,E:\001\IMG0000001.TIF,Y,,,
IMG0000002,,E:\001\IMG0000002.TIF,,,
IMG0000003,,E:\001\IMG0000003.TIF,,,
IMG0000004,,E:\001\IMG0000004.TIF,Y,,,
IMG0000005,,E:\001\IMG0000005.TIF,Y,,,
IMG0000006,,E:\001\IMG0000006.TIF,,,

4. **Text File:** An OCR or Extracted text file which corresponds to each produced document shall be provided for each document in the production as follows:

a. Text must be produced as separate text files, not as fields within the .DAT file.

The full path to the text file (OCRPATH) should be included in the .DAT file.

b. The text file name shall be the same name of the first image page for the document, followed by .txt.

c. An OCR or Extracted text file containing the produced document's content will be provided for all documents whether it is produced as an image file or native).

5. **Data File:** A data file shall be provided in a .DAT file format that extracts metadata into fields in a delimited text load file. The parties should use Concordance standard delimiters (ASCII 020 corresponding to a comma, ASCII 254 corresponding to a quote, ASCII 174

corresponding to a new line, and a semicolon used to separate values). The fielded data should include all the below metadata fields for a file/document. The first line of the data load file should contain the field headers indicating the contents of each field, and each subsequent line should contain the fielded data for each document.

**ELECTRONICALLY STORED INFORMATION
PRODUCTION FORMAT**

All ESI is to be produced in an “imaged” file with the corresponding “image load/unitization files,” “OCR or Extracted text files,” and the “associated delimited metadata database.” Additionally, select files should be produced in their native file format where an image file does not adequately represent the files as maintained in the ordinary course. The key concepts are outlined below.

1. **Native Files:** Microsoft Access files, Excel files, .CSV files, other similar databases and spreadsheet files, and media files shall be produced in the format which the electronically stored information was originally created. Native Files will be produced together with a placeholder TIFF image. Each TIFF placeholder will contain language indicating that the document is being produced in native format. A relative file path to the native file shall be provided in the metadata data file as described in item 5. To the extent the requesting party obtains through discovery a file or document that it believes is not adequately represented in an image file format, it may request that file or document be produced in native format, the production of which may not unreasonably be withheld.

2. **Image Files:**

a. Images files shall be 300 DPI Group IV single-page TIFF files (color images must be produced in JPEG format);

b. Hidden content, tracked changes or edits, comments, notes, and other similar information viewable within the native file shall also be imaged so that such content is viewable on the image;

c. Images must be endorsed with sequential Bates numbers in the lower right corner of each page and the file name of each image file shall be the Bates number.

d. AUTOCAD/photograph files should be produced as a single page JPEG file.

3. **Image Cross-Reference File:**

The image cross-reference file (.LOG or .OPT) links the images to the database records. It should be a comma-delimited file consisting of seven fields per line with a line in the cross-reference file for every image in the database with the following format:

ImageID,VolumeLabel,ImageFilePath,DocumentBreak,FolderBreak,BoxBreak,PageCount

Sample Image Cross-Reference File:

IMG0000005,,E:\001\IMG0000005.TIF,Y,,,
IMG0000006,,E:\001\IMG0000006.TIF,,,

4. **Text File:** An OCR or Extracted text file which corresponds to each produced document shall be provided for each document in the production as follows:

a. Text must be produced as separate text files, not as fields within the .DAT file.

The full path to the text file (OCRPATH) should be included in the .DAT file.

b. The text file name shall be the same name of the first image page for the document, followed by .txt.

c. An OCR or Extracted text file containing the produced document's content will be provided for all documents whether it is produced as an image file or native).

5. **Data File:** A data file shall be provided in a .DAT file format that extracts metadata into fields in a delimited text load file. The parties should use Concordance standard delimiters (ASCII 020 corresponding to a comma, ASCII 254 corresponding to a quote, ASCII 174

corresponding to a new line, and a semicolon used to separate values). The fielded data should include all the below metadata fields for a file/document. The first line of the data load file should contain the field headers indicating the contents of each field, and each subsequent line should contain the fielded data for each document.

ELECTRONICALLY STORED INFORMATION
PRODUCTION FORMAT

All ESI is to be produced in an “imaged” file with the corresponding “image load/unitization files,” “OCR or Extracted text files,” and the “associated delimited metadata database.” Additionally, select files should be produced in their native file format where an image file does not adequately represent the files as maintained in the ordinary course. The key concepts are outlined below.

1. **Native Files:** Microsoft Access files, Excel files, .CSV files, other similar databases and spreadsheet files, and media files shall be produced in the format which the electronically stored information was originally created. Native Files will be produced together with a placeholder TIFF image. Each TIFF placeholder will contain language indicating that the document is being produced in native format. A relative file path to the native file shall be provided in the metadata data file as described in item 5. To the extent the requesting party obtains through discovery a file or document that it believes is not adequately represented in an image file format, it may request that file or document be produced in native format, the production of which may not unreasonably be withheld.

2. **Image Files:**

a. Images files shall be 300 DPI Group IV single-page TIFF files (color images must be produced in JPEG format);

b. Hidden content, tracked changes or edits, comments, notes, and other similar information viewable within the native file shall also be imaged so that such content is viewable on the image;

c. Images must be endorsed with sequential Bates numbers in the lower right corner of each page and the file name of each image file shall be the Bates number.

d. AUTOCAD/photograph files should be produced as a single page JPEG file.

3. **Image Cross-Reference File:**

The image cross-reference file (.LOG or .OPT) links the images to the database records. It should be a comma-delimited file consisting of seven fields per line with a line in the cross-reference file for every image in the database with the following format:

ImageID,VolumeLabel,ImageFilePath,DocumentBreak,FolderBreak,BoxBreak,PageCount

Sample Image Cross-Reference File:

IMG0000005,,E:\001\IMG0000005.TIF,Y,,,
IMG0000006,,E:\001\IMG0000006.TIF,,,

4. **Text File:** An OCR or Extracted text file which corresponds to each produced document shall be provided for each document in the production as follows:

a. Text must be produced as separate text files, not as fields within the .DAT file.

The full path to the text file (OCRPATH) should be included in the .DAT file.

b. The text file name shall be the same name of the first image page for the document, followed by .txt.

c. An OCR or Extracted text file containing the produced document's content will be provided for all documents whether it is produced as an image file or native).

5. **Data File:** A data file shall be provided in a .DAT file format that extracts metadata into fields in a delimited text load file. The parties should use Concordance standard delimiters (ASCII 020 corresponding to a comma, ASCII 254 corresponding to a quote, ASCII 174

corresponding to a new line, and a semicolon used to separate values). The fielded data should include all the below metadata fields for a file/document. The first line of the data load file should contain the field headers indicating the contents of each field, and each subsequent line should contain the fielded data for each document.

ELECTRONICALLY STORED INFORMATION
PRODUCTION FORMAT

All ESI is to be produced in an “imaged” file with the corresponding “image load/unitization files,” “OCR or Extracted text files,” and the “associated delimited metadata database.” Additionally, select files should be produced in their native file format where an image file does not adequately represent the files as maintained in the ordinary course. The key concepts are outlined below.

1. **Native Files:** Microsoft Access files, Excel files, .CSV files, other similar databases and spreadsheet files, and media files shall be produced in the format which the electronically stored information was originally created. Native Files will be produced together with a placeholder TIFF image. Each TIFF placeholder will contain language indicating that the document is being produced in native format. A relative file path to the native file shall be provided in the metadata data file as described in item 5. To the extent the requesting party obtains through discovery a file or document that it believes is not adequately represented in an image file format, it may request that file or document be produced in native format, the production of which may not unreasonably be withheld.

2. **Image Files:**

a. Images files shall be 300 DPI Group IV single-page TIFF files (color images must be produced in JPEG format);

b. Hidden content, tracked changes or edits, comments, notes, and other similar information viewable within the native file shall also be imaged so that such content is viewable on the image;

c. Images must be endorsed with sequential Bates numbers in the lower right corner of each page and the file name of each image file shall be the Bates number.

d. AUTOCAD/photograph files should be produced as a single page JPEG file.

3. **Image Cross-Reference File:**

The image cross-reference file (.LOG or .OPT) links the images to the database records. It should be a comma-delimited file consisting of seven fields per line with a line in the cross-reference file for every image in the database with the following format:

ImageID,VolumeLabel,ImageFilePath,DocumentBreak,FolderBreak,BoxBreak,PageCount

Sample Image Cross-Reference File:

IMG0000001,,E:\001\IMG0000001.TIF,Y,,,
IMG0000002,,E:\001\IMG0000002.TIF,,,
IMG0000003,,E:\001\IMG0000003.TIF,,,
IMG0000004,,E:\001\IMG0000004.TIF,Y,,,
IMG0000005,,E:\001\IMG0000005.TIF,Y,,,
IMG0000006,,E:\001\IMG0000006.TIF,,,

4. **Text File:** An OCR or Extracted text file which corresponds to each produced document shall be provided for each document in the production as follows:

a. Text must be produced as separate text files, not as fields within the .DAT file.

The full path to the text file (OCRPATH) should be included in the .DAT file.

b. The text file name shall be the same name of the first image page for the document, followed by .txt.

c. An OCR or Extracted text file containing the produced document's content will be provided for all documents whether it is produced as an image file or native).

5. **Data File:** A data file shall be provided in a .DAT file format that extracts metadata into fields in a delimited text load file. The parties should use Concordance standard delimiters (ASCII 020 corresponding to a comma, ASCII 254 corresponding to a quote, ASCII 174

corresponding to a new line, and a semicolon used to separate values). The fielded data should include all the below metadata fields for a file/document. The first line of the data load file should contain the field headers indicating the contents of each field, and each subsequent line should contain the fielded data for each document.
