| TEHUM CARE SERVICES, INC. | Case No. 23-90086 (CML) |
| Debtor. | |

PLAINTIFF ROBERT D. BLAUROCK'S
REQUEST/MOTION TO MAKE ADDITIONS TO THE RECORD
ENTER INTO EVIDENCE PLAINTIFF'S MAY 6th, 2022
OPERATIVE REPORT
Under Fed.R.Civ.P. Rules 401,702,703,705.

The plaintiff Robert D. Blaurock, pro se; in the above captioned case matter and hereby asks this Court for permission to enter into record and evidence his medical informations both relative and pertinent to the civil action. Plaintiff states as follows:

1. Plaintiff's P.I. claims are against the former healthcare provider Corizon Health Services, now Tehum Care Services, Inc.
2. On or about Sept. 22, 2025 the plaintiff received copy of his May 6th, 2022 Operative Report from either ' datavant ' P.O. Box 3026, Monroe, Wisconsin 53566-8326, OR AMG VCC CENTRALIZRD GROUP, 1947 Founder's Circle, Wichita, Kansas 67206-3548, OR Ciox Health, P.O. Box 409900, Atlanta, GA. 33384-9900. Id. as Plaintiff Robert D. Blaurock's EXHIBIT NO. 2
3. The 5/6/22 Operative Report adequately reflects that the plaintiff underwent Recurrent incarcerated left inguinal hernia repair, thus removing the C.R.Bard,Inc./Davol,Inc. surgical device, i.e. Merlin Perfix Plug/mesh, then replacement mesh.
4. The original double bi-lateral left/right inguinal hernia procedures were performed while the plaintiff was under care of K.D.O.C.'s contract with Corizon Health Services, where plaintiff awaited 13 years before Corizon approved the 2018 procedure.

**OPERATIVE REPORT**

**PATIENT NAME:** BLAUROCK, ROBERT
**MEDICAL RECORD #:** 35817
**DATE OF SURGERY:** 05/06/2022
**PHYSICIAN:** JERRY GASTON, D.O.
**DATE OF BIRTH:** 07/15/1961

**PREOPERATIVE DIAGNOSIS:** Recurrent incarcerated left inguinal hernia.

**POSTOPERATIVE DIAGNOSIS:** Recurrent incarcerated left inguinal hernia.

**PROCEDURE PERFORMED:** Open repair of recurrent incarcerated left indirect inguinal hernia as a Lichtenstein approach with a flat sheet of Bard mesh.

**FIRST ASSISTANT:** None.

**GROSS FINDINGS:** This is a 60-year-old inmate who presents after having bilateral inguinal hernias repaired a couple of years ago. Now, he has a large incarcerated mass in his left inguinal area consistent with recurrent incarcerated left inguinal hernia. We discussed doing a posterior approach that was attempted but a solid sheet of mesh was run into and therefore we approached it from the anterior aspect. There was a large amount of omentum incarcerated into the defect, probably the size of a 3 cm in diameter. This was transected and the defect was repaired.

**DESCRIPTION OF PROCEDURE:** The patient was taken to the operating room, placed in a supine position, where under general endotracheal anesthesia, the procedure was carried out. Incision was made halfway between the ASIS and pubic tubercle, somewhat near his old incision and carried on a horizontal fashion. This carried down through skin and subcutaneous tissue down to the external oblique. I attempted to incise the external oblique but there was a sheet of a hard flat mesh at this area. Dissection was then carried inferiorly to that down to the external ring. The external ring was identified and was opened laterally. The external oblique was elevated and the incarcerated mass appeared to be lateral to the cord and was a large amount of omentum. This was all dissected off the cord down to its neck. It was obviously that this was not going to be reduced and therefore was transected with Bovie cautery. The contents were then reduced. The defect was probably a fingertip in size. With 0 PDS suture, this ring was tightened up. A plane was developed underneath the external oblique and a piece of flat sheet of Bard mesh was then secured laterally to the external oblique and then along the reflective portion inguinal ligament and then along the conjoined tendon. This was carried out all the way to the pubic tubercle also. There was a small slip made for the cord and the flat sheet of mesh was secured around the cord also. The defect was large enough to allow the cord to slide in and out just barely. Marcaine with epinephrine was injected into this area. The skin was closed with 3-0 Vicryl and 4-0 Monocryl. Benzoin and Steri-Strips were applied.

Plaintiff Robert D. Blaurock's
Exhibit No. 2
